

IN THE CLAIMS

Claims 1-17. (Canceled)

Claim 18. (Currently Amended) A beverage container holder for round and square beverage containers, comprising:

a rectangular basket having four side walls, each having a top edge border which collectively define an open top end and which, in turn, defines a rectangular opening, at least two of said side walls disposed opposite one another each having at least two openings one opening therethrough disposed beneath said top edge border thereof; and

at least four resilient, V-shaped, flat fingers, each having an upper fixed end which is coupled to said top edge border of said rectangular basket and a lower free end extending generally downward into one of said side wall openings of said rectangular basket inwardly toward said rectangular opening, said ~~at least four resilient~~ fingers being ~~V-shaped to define~~ each defining a point of a V between said ends thereof and having a V-shaped profile when viewed in a vertical plane with the point of the V extending radially inwardly generally towards the center of the rectangular opening, ~~said V-shaped fingers each defining an included obtuse angle therebetween~~, said ~~at least four fingers forming a~~ biasing structure for releasably supporting a beverage container when inserted into said rectangular basket ~~each being made of a single unitary member~~ and cooperating to resiliently and releasably grasp both round and square beverage containers solely at the point of said V-shaped fingers, ~~said fingers each depending from one of said top edge~~

~~borders of said opposite side walls such that they each extend downwardly into a different one of said side wall openings; and~~

a generally U-shaped hook attached to and extending above said basket,
wherein

said rectangular basket, said at least four resilient fingers and said generally U-shaped hook are formed as a single unitary member.

Claim 19. (Canceled)

Claim 20. (Previously Presented) A beverage container holder according to Claim 18, wherein said single unitary member is plastic.

Claim 21. (Currently Amended) A beverage container holder for round and square beverage containers, comprising:

a rectangular tray having a top wall having a pair of spaced-apart rectangular openings; and

at least two sets of four resilient, V-shaped, flat fingers, each having an upper fixed end which is coupled to said top wall of said rectangular tray and a lower free end ~~said fingers of each set~~ extending inwardly toward a different one of said rectangular openings, said ~~resilient fingers being V-shaped to define~~ each defining a point of a V between said ends thereof and having a V-shaped profile when viewed in a vertical plane with the point of the V extending radially inwardly generally towards the center of the respective rectangular opening, ~~said V-shaped fingers each defining an included obtuse~~

~~angle therebetween; said at least four fingers of each set forming a biasing structure for~~
~~releasably supporting a beverage container when inserted into said rectangular basket and~~
~~cooperating to resiliently and releasably grasp both round and square beverage containers~~
~~solely at the point of said V-shaped fingers; said fingers each depending from said top wall~~
~~of said tray said resilient fingers are each formed as a single unitary member; and~~
a supporting member rotatably coupled to said rectangular tray and being
pivotal into a position located below said pair of rectangular opening openings.

Claim 22. (Previously Presented) A beverage container holder according to Claim
21, further comprising:

spring means for biasing said supporting member to said position located
below said rectangular opening.

Claim 23. (Canceled)
